

How to Be a Successful PositiV Project Manager

We want to make sure you have the tools you need to ensure a successful PositiV® installation. Please consult this guide and check our entire collection of <u>PositiV Resources</u>. Thank you for your business.

Step 1 Verify Site Compatibility

Once a desired site is selected, determine the viability of PositiV at the location by using the <u>PositiV Site Feasibility Checklist</u>. Because PositiV is a wireless, self-powered device, there are certain parameters that must be met for it to be considered a good fit for your facility. Completing this quick checklist will help determine if a site is compatible and capable of a successful PositiV system installation.

Step 2 Logistics: Schedule an Installation Date and Notify Melink

After a site is determined compatible, please notify Melink when the self-installation will take place and where you would like the PositiV system to be shipped. Please provide notice to Melink (Mositiv@melinkcorp.com) at least 7 business days before the desired installation date. This will provide Melink time to manufacture the PositiV system and ship it to the site before the scheduled installation.

Step 3 Follow the Installation Manual and Verify Completed Steps

To install the PositiV system at each site, use the PositiV Installation Guide, PositiV Installation Video, and PositiV Cx App, which all can be found <a href="https://example.com/her
